|    | I'm Shariq. I built Kyvern. We give AI agents a wallet that can't go rogue.                                                                                                                                    |             |
| 02 | PROBLEM                                                                                                                                                                                                        | 0:08 → 0:23 |
|    | Every AI agent that touches money today uses somebody's keys.<br>One bad inference, one runaway loop — your wallet is empty.                                                                                   |             |
| 03 | SOLUTION                                                                                                                                                                                                       | 0:23 → 0:38 |
|    | Kyvern gives your agent a Visa with a daily cap.<br>Budgets · allowlists · kill switch. Enforced by Solana.                                                                                                    |             |
